SarStart for Dogs Testimonial

After posting about Senna's toe problem, a PAWStar all the way up in Kansas suggested trying a new supplement called SarStart for Dogs. Supposed to be especially good for arthritis and stiff joints (and Senna has arthritis in several of his toes). I started using SarStart just a few weeks ago on all my boys except Braedan. I really didn't expect to see anything dramatic, although Jenn said she noticed positive changes in especially her older dog after about a month on SarStart. I was therefore, intrigued when I started seeing changes in Tristan after just a week on the supplement.

If you saw my e-mail about Tristan's birthday, you saw the photo of him on the agility table with his Frisbee in his mouth. This in itself was completely new. Although it used to be a favorite thing for him to do (get up on the table and wait for me to come play tug with his Frisbee), it's probably been close to a year

since Tristan has been on the table. I was, therefore, surprised when I saw him on it and trying to engage me in play. And it wasn't just a one-time occurrence. I thought it was a fluke, but Tristan offered up the table a few more times while we were outside that particular day, and he's continued to get on the table from time to time since.

In addition to this change, I've noticed that Tristan is not losing his back legs and stumbling and falling nearly as much as he had been. This has been particularly noticeable when I'm tossing his Frisbee to him. One PAWStar commented yesterday after class that she'd never seen Tristan quite as frisky/active. She's used to Tristan simply strolling around looking/begging for treats. Yesterday Sherry actually saw Tristan run for his Frisbee.

I'm also seeing changes in Boomer (who's 6 months younger than Tristan). He's also become more active outdoors. Without asking, he's also been offering to get on the small table in the field. I've also caught him on the contact trainer, and he offered up the weave-a-matics without my asking. Like Tristan, Boomer is more interested in getting free food these days, so to see him offering up obstacles on his own was quite astonishing.

I've also noticed that neither Tristan nor Boomer have been sleeping as hard (i.e. making me sometimes think they've passed away), nor have they been sleeping as much. From our kitchen window, we're seeing Tristan wandering around in the front yard several times during the day. Considering he has back porch steps to descend and ascend (we have a ramp, but he doesn't like it), this is also unusual for him.

Needless to say, I'm utterly amazed at the changes in both Boomer and Tristan since starting them on this new vitamin supplement. I've told several folks about it and they've already checked into buying SarStart online. Jenn checked with the sales rep, and he said that changes usually take 4-6 weeks, but he felt that the age of Tristan and Boomer may have contributed to the more rapid improvement I've seen. Whatever the case, I like it!

If you'd like to try it on your dog(s), the website is www.SarTec.com. If you look at the bottom left corner of the home page, you'll see SarStart for Dogs listed.

This is some good stuff!!! - Debbie Spence*

*Debbie Spence attended her first agility class at Dallas Agility Working Group (DAWG) back in 1989 and has been a member ever since. In November 1996, she opened her own school, PAWSitive Agility Working School (PAWS) in Keller, Texas, where she has established a notably successful training program that has enabled her students to enhance their bond with their dogs while enjoying the challenges of training and competing in the exciting sport of dog agility (www.pawsagility.com).

The image shows the product label for SarStart for Dogs. The label has an orange header with the SarTec logo. Below the header, the product name 'SarStart for Dogs' is prominently displayed in a large, bold, black font. Underneath the product name, it says 'A Vitamin Supplement for Canines'. The label is divided into several sections: 'CAUTION' with a warning to keep it out of reach of children; 'DIRECTIONS' providing instructions on how to administer the supplement based on the dog's weight; 'Ingredients' listing various vitamins and minerals; 'SHAKE WELL BEFORE USING.'; 'Guaranteed Analysis' which includes a table of nutrient levels per 5.0 ml dose; and 'NET CONTENTS: 16 Fluid Ounces'. At the bottom, there is contact information for SarTec Corporation and a lot number.
