

# SarBatch™

## *Automatic Batch Control Moisture Addition System*

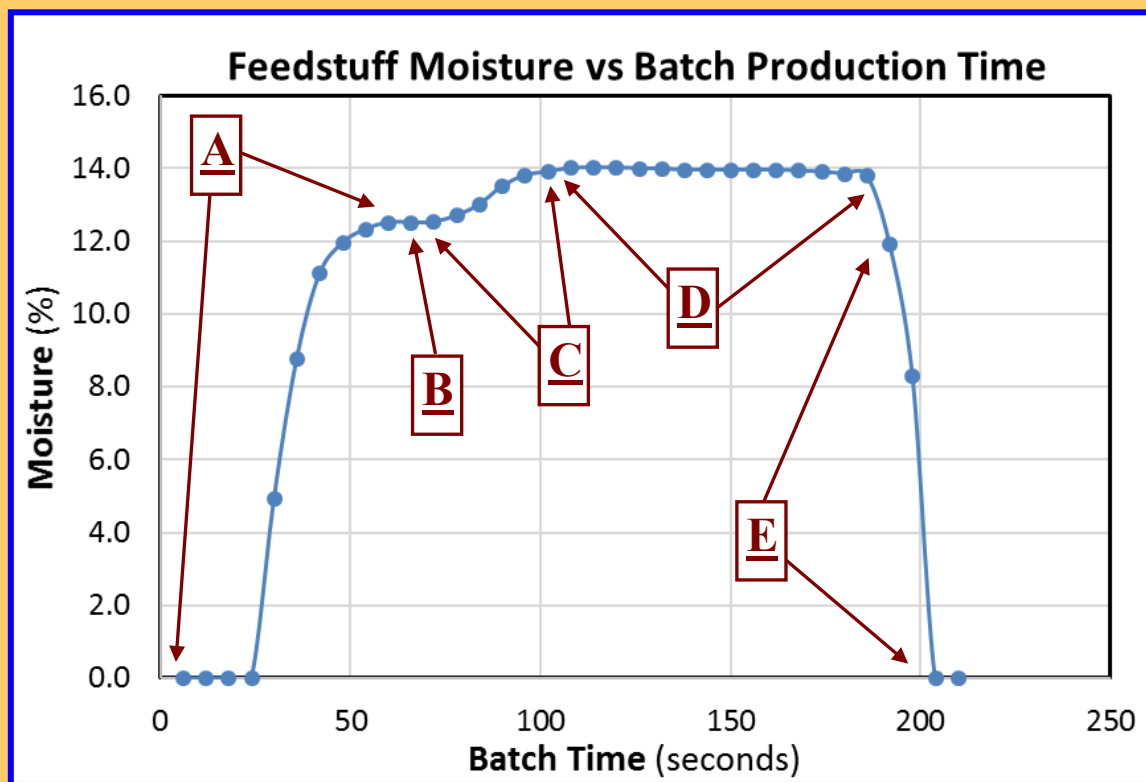

### The Benefits of Using a SarBatch™ System Include:

- Precise moisture control of feedstuffs processed in a batch mode
- Ideal for pelleting and crumble operations
- Decreased fines
- Helps accurately control pellet hardness
- Helps increase pellet durability
- More palatable feedstuffs

# SarBatch™ puts you in control

The chart below shows the measured moisture for a feedstuff batch as processed with the **SarBatch™** system. In this example, ground corn, soybean meal, wheat middlings and a mineral pack are added to the mixer (**A** from t = 0 to 65 seconds). The **SarBatch™** system measures the incoming moisture of the ingredients (12.5 %) and determines how much water to add based on the target (14.0 %) that was selected (**B** from t = 66 to 70 seconds). The required water and **SarTemp® SG** are added to the mixer along with any liquid ingredients (**C** from t = 71 to 100 seconds). All ingredients are mixed thoroughly (**D** from t = 101 to 190 seconds). The mixer is emptied and a new batch process is started (**E** t = 191 to 205 seconds).

Contact a SarTec representative to stop by and tell you about the new **SarBatch™** system today!
